

# CABLE FLEETER

## CABLE FLEETER with cable blowing machine

The Fleeter replaces the manual method of “figure eighting” cable, and provides protection and security for the cable.

Following installation of the cable in the first leg of the duct route the balance of the cable is removed from the drum and fed into the Fleeter, thereby releasing the cable end ready for blowing into the second leg.

The Fleeter provides a smooth and simple system while ensuring cable protection from pedestrians or vehicles and prevents contamination from mud, soil or dust.

The Fleeter is designed to work in conjunction with the Cable Blowing Machine, which provides the cable feed in and out of the Fleeter.

The Fleeter consists of a road going trailer chassis on which is mounted a cable storage cassette, rotating cable guide quadrant and duct clamp assembly
